Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 5, and 9, are rejected under 35 U.S.C. 102(b) as being anticipated by the submitted prior art of Kawamura et al (EP 0735780).

Kawamura et al discloses a video reproducing apparatus that shows all the limitations recited in claims 1, 5, including the feature of storing received compressed picture data in a forward reproduction order in at least one GOP according to MPEG standard, the compressed picture including I, P, and B-picture data (See Kawamura et al's Figure 1, component 5), the feature of retrieving the compressed picture data to produce decoded pictures by picture predictions according to a decoding method of the MPEG standard (See Kawamura et al's Figure 1B), the feature of temporarily storing the decoded pictured data in order to reduce the times of repeatedly retrieving and decoding compressed picture data in a forward reproduction order (See Kawamura et al's Figure 1B, component 16), and the feature of decoding retrieved picture data employing the temporarily stored decoded picture data for display in an order reverse to the forward reproduction order as specified in the present claims 1, and 5. (See Kawamura et al's column 5, lines 3-7, and column 9, lines 20-24).

With regard to claim 9, it is noted that all of the features recited thereof are present in Kawamura et al, including the feature deriving bit signals from the detected

signals, obtaining MPEG coded digital picture data and decoding the coded picture data. Applicant's attention is directed to Kawamura et al's Figure 1, components 3, 4, 33, 5, and Figure 1B, component 20).

3. Claims 2-4, and 6-8, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kawamura et al PN. 6,078,722 discloses an apparatus for reverse playback of a time division multiplexed signal.

Toebe, VII et al discloses a computing system for providing high quality reverse play of MPEG video streams using computing resources approximately the same as those required for forward MPEG play.
